

Geo-Met Tiered Badge System – AI Implementation Guide

Core Functionality

- Point-Based Ranking System (Not based on report type, only on verified engagement).
- Users earn points for contributing, verifying, and engaging with the platform.
- Ranks are auto-assigned when thresholds are met.
- No inactivity demotions, but dormant status applies after 60 days.

① Data Structure

User Profile Model (Database)

Each user will have a profile in the system storing their tier, points, and engagement history.

Example JSON:

```
{
  "user_id": "12345",
  "username": "StormWatcherX",
  "current_tier": "Thor's Storm",
  "total_points": 1450,
  "last_activity": "2025-02-21",
  "reports_submitted": 28,
  "reports_verified": 16,
  "upvotes_received": 42,
  "downvotes_received": 3
}
```

② Point System – How Users Earn Points

Action	Points Earned	Conditions
Submit a report	+10	Only if not flagged as false
Report gets verified by a high-tier user	+20	Poseidon-tier and above validate
Upvote received on a report	+5	From any user
Verify another user's report	+15	Must match AI/moderation verification
Downvote received	-10	If flagged as false or misleading
AI detects high-confidence accuracy	+25	Based on AI weather pattern matching
False report detected	-30	If flagged by multiple Zeus-tier users or AI

③ Rank Progression – How AI Determines Upgrades

Rank	Required Points	Perks & Abilities
------	-----------------	-------------------

Odin's Watch (Bronze)	0 - 499	Basic reporting tools, reports need verification
Thor's Storm (Silver)	500 - 1499	Storm reporting, reports gain priority
Poseidon's Surge (Gold)	1500 - 2999	AI forecasting insights, influence over alerts
Zeus' Wrath (Platinum)	3000 - 4999	Can validate or override lower-tier reports
Freyja's Dominion (Elite)	5000 - 9999	Advanced AI forecasting tools, regional alert influence
Gaia's Dominion (Legendary)	10,000 - 24,999	Permanent rank, beta access to AI weather tools
Ra's Solar Order (Ultimate)	25,000 - 49,999	Ultra-exclusive, global influence on alerts
Cronus' Timeless Authority (God-Tier)	50,000+	The top 0.1%, full verification authority

④ AI Logic & Code-Level Implementation

Python Rank Upgrade Logic:

```
```python
def check_rank_upgrade(user):
 points = user["total_points"]
 rank_thresholds = {
 "Odin's Watch": 0,
 "Thor's Storm": 500,
 "Poseidon's Surge": 1500,
 "Zeus' Wrath": 3000,
 "Freyja's Dominion": 5000,
 "Gaia's Dominion": 10000,
 "Ra's Solar Order": 25000,
 "Cronus' Timeless Authority": 50000
 }
 for rank, threshold in rank_thresholds.items():
 if points >= threshold:
 user["current_tier"] = rank
 return user["current_tier"]
```
```

⑤ Handling Dormant Status (No Inactivity Demotions)

Python Dormant Status Check:

```
```python
from datetime import datetime, timedelta

def check_dormant_status(user):
 last_active = datetime.strptime(user["last_activity"], "%Y-%m-%d")
 if datetime.now() - last_active > timedelta(days=60):
 user["dormant_status"] = True
```
```

```
else:
    user["dormant_status"] = False
return user["dormant_status"]
...
```

⑥ AI Moderation – Preventing Abuse

- AI automatically flags false reports using historical weather data + community verification.
- If a user gets too many false reports, the system pauses point gain until further review.
- Multiple Zeus/Freyja-tier users can override bad actors.
- Ra & Cronus-tier users have final say.

⑦ AI-Led Gamification & Engagement

- Users get badges & achievements for milestones.
- AI dynamically rewards limited-time event badges (e.g., tracking a major storm).
- Special leaderboards for engagement, but rank is based on points, not placement.

🔥 Final Thoughts

- ✓ Fully automated rank system with point-based progression.
- ✓ AI-driven validation for accuracy & fairness.
- ✓ No forced engagement or fake report farming.
- ✓ User-driven growth—legit engagement unlocks power.

🚀 Ready for integration.
