

Geo-Met: Real-Time Weather Intelligence for Australia

1. Vision Statement

Geo-Met redefines weather intelligence for Australia, delivering hyper-local, real-time forecasts that empower everyone—from farmers safeguarding crops to emergency teams preparing for floods. By blending AI, crowdsourced insights, IoT sensors, and satellite data with trusted sources like the Bureau of Meteorology (BoM), we provide actionable weather insights via a robust API, keeping Australians one step ahead of the weather.

2. Executive Summary

Weather shapes our lives and livelihoods, yet traditional forecasts often fall short—too broad, too slow, or too static to meet today's demands. Geo-Met changes that. Our platform fuses live data from IoT sensors, satellites, and millions of Australians with cutting-edge AI to deliver precise, street-level forecasts that update as conditions shift. Whether it's a farmer timing irrigation, a logistics firm rerouting trucks, or a government agency bracing for disaster, Geo-Met offers the tools to act with confidence. Scalable from local users to global markets, it's weather intelligence built for a changing climate.

Designed to complement existing systems like BoM, Geo-Met enhances precision and responsiveness, turning raw data into decisions. As climate volatility rises, we're bridging the gap between yesterday's models and tomorrow's needs.

3. Market Analysis & Industry Insights

Australia's weather tech landscape is evolving fast. Governments and industries spend hundreds of millions annually on climate solutions—estimated at over \$500 million—driven by AI's potential to sharpen forecasts and cut risks. Demand is surging in agriculture, aviation, energy, and logistics, where precise, timely data can save millions.

Industry Landscape

- Investment Trend: Public and private sectors prioritize AI-driven climate tools, from BoM's upgrades to CSIRO's research programs.
- Sector Needs: Businesses and agencies need granular, real-time insights beyond regional averages.

Target Market

- Agriculture: Optimize irrigation and protect yields with street-level forecasts.
- Energy: Manage renewable grids and outages with predictive weather shifts.
- Disaster Management: Enable early warnings for floods, fires, and storms.
- Transportation: Reroute logistics around weather disruptions in real time.

Competitor Analysis

BoM provides trusted, free forecasts, but they're broad and periodic. Global players like tomorrow.io offer AI-driven precision but rely heavily on historical data. Geo-Met stands out by integrating live crowdsourced reports, IoT streams, and satellite feeds, updating forecasts dynamically—offering unmatched adaptability for Australia's unique climate challenges.

4. Problem Statement

Extreme weather costs Australia over \$4.5 billion yearly—think flood repairs, insurance payouts, and lost productivity. Traditional models, built on historical data and regional grids, can't keep pace with rapid shifts or pinpoint local impacts. Farmers lose crops to unpredicted rain, responders scramble as storms escalate, and businesses face preventable disruptions. Geo-Met solves this with real-time, hyper-local intelligence, turning uncertainty into preparedness.

5. Solution & Technology

Geo-Met transforms forecasting with a dynamic, data-driven approach. Our AI analyzes millions of inputs—IoT sensor readings, satellite imagery, radar, and verified user reports—refining predictions in real time. Unlike static models, we adapt instantly to environmental shifts, offering:

Core Features

- Hyper-local Precision: Forecasts down to your street, powered by geospatial analytics.
- Real-time Updates: Continuous fusion of live data, refreshed every 5 minutes.
- Predictive Power: Early warnings for severe weather, days ahead.
- Seamless Integration: Custom alerts and an API for businesses and apps.

Technology Stack

- AI & Machine Learning: Neural networks that learn and adapt with every data point.
- Geospatial Analytics: Satellite and GIS tools for pinpoint accuracy.
- IoT Network: Sensors tracking temperature, humidity, and more in real time.
- Cloud Infrastructure: Scalable processing for Australia and beyond.

We validate user reports with algorithms and cross-check against BoM data, ensuring reliability at scale.

6. Business Model & Monetisation Strategy

Geo-Met turns weather data into value for users, businesses, and governments. Our edge lies in proprietary AI and a growing dataset no competitor can match.

Revenue Streams

- Subscription Model: Monthly plans for individuals and SMEs needing reliable forecasts.
- API Licensing: Real-time data for apps and platforms (\$500-\$5,000/month, tiered).
- Custom Analytics: Tailored solutions for agriculture, insurance, and energy.
- Government Contracts: Disaster prep and smart city partnerships.

Growth Potential

- Scale to Asia-Pacific markets hit hard by climate change.
- Partner with insurers to refine risk models.
- Offer white-label tools for global cities.

7. Go-to-Market Strategy

Phase 1: Pilot & Early Adopters (Q2 2025)

- Test with farmers, logistics firms, and insurers in NSW and QLD.
- Partner with BoM and private stakeholders for credibility.

Phase 2: Nationwide Rollout (Q3 2025)

- Launch SaaS platform and API, targeting 10,000 users.
- Integrate with weather apps and industry software.

Phase 3: Global Reach (Q1 2026)

- Expand to flood-prone Asia-Pacific and wildfire-hit North America.
- Pitch to smart city planners worldwide.

8. Roadmap & Milestones

- Q2 2025: Beta launch with 50 industry partners.
- Q3 2025: Full commercial rollout—SaaS and API live.
- Q1 2026: Hit 100,000 users; begin international push.
- Q3 2026: Secure first smart city contract.

9. Expression of Interest (EOI) for CSIRO

Geo-Met invites CSIRO to join us in pushing weather science forward. Our real-time, AI-driven platform aligns with CSIRO's expertise in machine learning (Data61) and climate risk tools (INDRA), offering a chance to refine predictive models with crowdsourced data. Together, we can boost Australia's resilience to climate challenges, enhance disaster preparedness, and unlock economic gains for weather-sensitive sectors. Let's collaborate to make weather intelligence a national strength.

10. Investment Ask

- Funding Required: [To Be Determined]
- - Use of Funds:
 - 60%: AI development and IoT/cloud scaling.
 - 20%: Marketing and partnerships (e.g., BoM, CSIRO).
 - 10%: Regulatory compliance (data privacy, meteorology standards).
 - 10%: Hire engineers and data scientists.
-

11. Team & Advisory Board

- Founder & CEO: Robi Demonte – Visionary behind Geo-Met’s mission.
- Chief Technology Officer: [AI/ML Expert – e.g., “Dr. Jane Smith, ex-CSIRO Data61”]
- Advisory Board: Meteorologists, AI specialists, and industry leaders (e.g., “Prof. John Doe, BoM veteran”).

12. Call to Action

- Contact: fortunamagna@tuta.io | [geomet.tech]
- Try It: Sign up for beta access at [geomet.tech].
- Join Us: Investors and partners, let’s shape the future of weather together.
