

AEROTECH INDUSTRIES

Business Scope

Based in Brisbane, Queensland, Australia Aerotech Industries currently offers professional drone photography services, using the latest technology we wish to provide thermal imaging surveys, multi-spectral inspections, 2D and 3D precision mapping, as well as aerial photo and videography. And possibly search and rescue and security services (more on these services can be provided with the signing of an approved NDA)

Our drone pilots hold CASA licenses to fly Aerotech company registered UAVs (unmanned aerial vehicles) in Australia and are experienced in obtaining the correct permissions to film according to your needs.

Why use a drone?

Drones or UAV's are cost effective, safe and efficient methods of reaching areas you wouldn't otherwise be able to see without the use of scaffolding and helicopters. When it comes to industrial inspections, use of a drone can be invaluable in pinpointing problem areas, getting a simple visual check on a piece of equipment or giving an in-depth thermal analysis of a building or area of land.

The technology allows us to quickly provide accurate readings and measurements and save time and money in investigations. With recent bushfire and COVID-19 activity and crisis applications using drones have seen a rise in border control and security, zero contact sanitising spray, zero contact delivery, fire thermal reads and search and rescue

Goals, scope and equipment required

Within 6 months steady contracts locked in

Within a year the main sup-plier of drone services to the below mentioned companies and more. Hire new pilots and admin/sales staff.

Currently locked in or promising prospects HPC contracting, Mosaic Constructions and development, The modern group (solar and roof restoration), CK Electrical

New full spec drone M600 Pro Thermal + Visual Package or similar Approx. \$7899 +

Monitor and surveying software approx \$5-10000

Large format printer and equipment for printing plans and photographs for casual users and also development and tradesmen (photos, blueprints, scale plans) these can be sold for a minimum of \$250.00 each and able to add a same day delivery fee

Advertising budget (TBA) (Most likely not needed due to current network and WOMF)

Our main operator Robert DeMonte is familiar with the work force and running multiple various types of successful businesses. The most recent being a vending machine company solely run generating in excess of \$150k per annum growing from an initial startup self injection of \$5000.00 AUD over two years.

Our vision for the short term is to purchase new equipment and train using this vigorously while building the client database and moving in to new areas of drone utilisation, as the world changes we want to be at the fore of this and capitalise while doing so. The possible applications for drone use in the future are untapped.

Because the website, current network and equipment has been managed or already purchased there currently are no overheads other than travel and time spent. The company name Aerotech Industries PTY LTD and bank accounts, website www.aerotechindustries.com.au and instagram @aerotech_industries have already ben setup and running for some time.

Current website insights without paying or using google adwords etc InSight measures your online performance, compared to online businesses like yours currently we are ranking higher than 89% of sites like ours

Our initial investment request is open to offers but we are asking for \$10,000.00-\$25,000 to cover initial costs and foresee a return within the first 3 months on this which can be reinvested increased or withdrawn with obvious clear contractual obligations being drawn beforehand. The return percentage on top of the initial capital raised is negotiable and we are happy to incorporate dual investors or solely capital and return type silent partners.

We look forward to hearing from you wether it's to invest, further enquiries or how we can work together on future projects, thank you for your time.
